School IT Ticket Automation: Problem Statements

Use the customer perspective to describe how manual school IT ticket handling affects students, teachers, and helpdesk agents.

The project addresses Wi-Fi, projector, password/login, and slow-computer requests. ServiceNow Flow Designer will classify the ticket from keywords, assign Category and Subcategory, and notify the Caller.

Project scenarios and classification logic:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Student or	submit a school	the request	many daily	uncertain while waiting for

	teacher	IT support request	is manually reviewed and categorized by IT staff	requests make manual routing slow and error-prone	the issue to reach the right queue
PS-2	School IT helpdesk agent	receive complete, correctly routed ticket records	the agent must interpret keywords and update Category and Subcategory by hand	ticket volume grows and inconsistent data makes routing harder	overloaded and concerned about delays and rework
