

Project Design Phase-II
Technology Stack (Architecture & Stack)

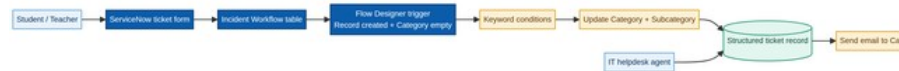

Date	31 January 2025
Team ID	Not specified in project brief
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture: ServiceNow School IT Ticket Automation

The architecture uses the ServiceNow platform, a custom Incident Workflow table, Flow Designer conditions, reference and choice fields, and email notification. The design is no-code, maintainable, and suited to a school helpdesk.

Project architecture: automated ticket classification and notification

Source: Auto Ticket Classification using Flow Designer project brief

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	Form used by students and teachers to submit Caller and Short Description.	ServiceNow record form
2	Application Logic-1	Trigger flow when a record is created and Category is empty.	ServiceNow Flow Designer
3	Application Logic-2	Evaluate Wi-Fi, Projector, Password/Login, and Slow/Hanging keywords.	Flow Designer If / Else If conditions
4	Application Logic-3	Update Category and Subcategory and send the caller confirmation.	Flow Designer Update Record + Send Email
5	Database	Store auto-number, Caller, choices, descriptions, state, and assignment data.	Incident Workflow custom table
6	Cloud Database	Platform-managed persistence for ticket records and reference data.	ServiceNow platform data store
7	File Storage	Store the Project Update Set XML export for deployment and reuse.	ServiceNow Update Set / XML export
8	External API-1	No external API is required for core classification.	None
9	External API-2	Caller notification uses the platform email action.	ServiceNow email notification
10	Machine Learning Model	Not required; classification is deterministic keyword logic.	None — no-code rules
11	Infrastructure (Server / Cloud)	Hosted enterprise service platform for forms, data, flows, and email.	ServiceNow instance

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	No external framework is required for the no-code implementation.	ServiceNow platform configuration
2	Security Implementations	Role-based access, controlled configuration access, and authorized record updates.	ServiceNow roles and ACLs

S.No	Characteristics	Description	Technology
3	Scalable Architecture	Standardized fields, reusable flow conditions, and update sets support adding new issue types.	Flow Designer + Update Sets
4	Availability	Hosted platform services support the school helpdesk during operating hours.	ServiceNow instance availability
5	Performance	Classification occurs at record creation using lightweight keyword checks and direct field updates.	Flow Designer conditions
