Problem–Solution Fit: School IT Ticket Classification

The project fits a frequent helpdesk problem: students and teachers need quick support, while IT agents need consistent, correctly routed ticket data.

Purpose:

- ☐ Match the user’s simple submission behavior with a no-code automation that removes manual categorization.
- ☐ Improve adoption by using the existing ServiceNow ticket form and email channel.
- ☐ Strengthen trust by confirming receipt and applying predictable Category/Subcategory rules.
- ☐ Reduce recurring operational annoyance: manual review, rework, and incorrect routing.
- ☐ Define the current situation and the measurable outcome for the school helpdesk.
